Phone +48 536 981 245

I finished technical school of computer science.

Unfortunately, life took a slightly different direction than I have planned and I ended up in the plastics processing industry.

Due to my current job's lack of self-development opportunities, I feel a need for change.

After a few years, I would like to return to IT.

Because of my communicativity, problem-finding mindset and analytical skills I became interested in software testing.

Educating myself on websites like Udemy, LinkedInLearning, reading gitbooks, ISTQB syllabus, articles, forums, Facebook groups and following content creators on LinkedIn about software testing.

When I am not learning theory, I am participating in crowdtesting projects e.g. uTest.

Work History

Feb 2022 - present

Software Tester

uTest.com, Remotely

I participated in the following application testing projects:

- e-commerce web - online store, discounting with a coupon, correct operation of the cart
